

SURABI WEB TECHNOLOGIES

Business software built around how you actually work

Surabi Web Technologies designs and builds custom ERP, CRM and e-commerce systems for manufacturers, retailers and service businesses. We work in core PHP and MySQL by choice — a stack we control end to end — and stay on to support what we build, deployed and maintained on hosting we manage.

20+

applications built & running

6

industries served

18

modules in our largest ERP

100%

deployed & in active use

What we build

- **Custom ERP systems** — production, stock, job cards and despatch, matched to your actual shop floor.
- **CRM & sales tools** — leads, quotations, orders and payment follow-up, built around your sales process.
- **Retail & e-commerce** — billing, inventory and storefronts with GST-ready reporting.
- **Business websites** — fast, well-structured sites with admin panels your team can manage.

Flagship build: Surabi Flexi Pac ERP

The challenge: a flexible-packaging manufacturer was running sales, production and stock as separate paper and spreadsheet processes, with no single record from quotation to despatch.

The build: a complete ERP covering CRM and sales, extruder and printing production, monolayer, sleeve and folding lines, job-card tracked stock, and role-based access across every module.

The result: live and in daily production use, with every order tracked end to end on one system.

Industries we serve

Flexible packaging & woven sacks · Retail & departmental stores · Pharmacy · Construction · Service businesses · Education & wellness · Food & beverage · B2B marketplaces

How a build comes together

- 1. Map the workflow** — we start from how the business runs today: its forms, registers and counters.
- 2. Build module by module** — each piece is delivered, tested against real data, and put to work before the next begins.
- 3. Deploy & support** — live on hosting we manage, with fixes and new modules added as the business changes.
